

WHAT IS CLAIMED IS:

- Sub A2
1. A semiconductor storage medium comprising:
    - a housing;
    - a camera mounted on the housing;
    - an image processor for generating image data from a picture signal captured by said camera; and
    - a first memory for storing the image data supplied from said camera.
  2. The semiconductor storage medium as set forth in Claim 1, wherein said housing has the shape of a card.
  3. The semiconductor storage medium as set forth in Claim 1, wherein said camera is rotatably mounted on said housing.
  - Sub A3
  4. The semiconductor storage medium as set forth in Claim 1, further comprising:
    - a second memory for storing control information which enables to access the first memory; and
    - a controller for controlling the access to the first memory based on the control information stored in the second memory.
  5. The semiconductor storage medium as set forth in Claim 1, wherein the controller operates based on the control information stored in the second memory to store the image data and data whose format is different from that of the image data in the form of directory structure into the first memory.

6. The semiconductor storage medium as set forth in Claim 1, wherein the first memory is a random-access memory and the second memory is a read-only memory.

7. Access to the ROM 6 and RAM 7 is controlled by the controller 8. The card-type semiconductor storage medium 1 with the camera is connected to a personal computer for example via the interface 9.
